Problem Statement:

There are little to no convenient methods of finding public restrooms in Columbia without prior knowledge of the area.

Details:

We plan to create a website/app that would guide newcomers to the restrooms in their surrounding area. It would also include user feedback to help the user find the most convenient, clean, and available restrooms. The system would also make sure that the areas that are available can be accessed within their certain time frame. This app would also be used by the owners of the restrooms and buildings, creating a verifiable source of available hours.
